

PARTNERSHIP DOCUMENT

1. Partnership Overview

Partner: Elixir of Life

Sector: Algae Biotechnology, Circular Bioeconomy, Carbon Capture

Initiated: 23rd March 2025

Geographic Focus: India (with global market ambitions)

Konma Org Role: Tech protocol provider for traceability, tokenization, and ESG-grade climate impact verification.

Elixir of Life Role: Algae-based innovation in pharmaceuticals, nutraceuticals, biofuels, bioplastics, and bioremediation.

2. Shared Vision

"Build regenerative economies through transparent, tech-enabled bio-innovation."

Both partners aim to:

- Transform climate action through algae-centric biotechnologies.
- Enable real-time traceability and supply chain trust using blockchain and IoT.
- Monetize climate and health impacts through tokenized outcomes and open carbon markets.

3. Strategic Objectives

- Integrate KarbonLedger's platform for supply chain traceability of algae-based products.
- Tokenize carbon sequestration from algae cultivation and biofuel operations.
- Apply AI/ML to optimize algae growth and verify ESG-aligned outcomes.
- Align R&D efforts to deliver verified SDG impacts (Goals 3, 9, 12, 13, 14, 17).

4. Roles & Responsibilities

Konma Org

- Enable smart contract-driven verification of climate claims.
- Provide IoT and blockchain toolkits for algae monitoring and carbon tracking.
- Deliver DAO-based governance modules for community-led decisions.

Elixir of Life

- Lead algae cultivation, product development, and bioprocessing.
- Generate environmental data from algae bioreactors, ponds, and labs.
- Co-develop ESG product impact dashboards for customers, funders, and regulators.

5. Joint Use Cases

Use Case	Role of Konma Org	Role of Elixir of Life	Expected Outcome
Carbon Sequestration via Algae	Tokenization of verified CO ₂ capture	Cultivation of high-efficiency algae strains	Monetizable carbon offsets
Algae Product Traceability	Blockchain ledger + smart contracts	Supply chain and processing of omega-3s, nutraceuticals	Transparent, verifiable products
Bioremediation Monitoring	IoT sensor data collection + ZKP verification	Algae used in wastewater and pollution treatment	ESG reporting for municipalities/industries
Tech Education & Training	Open protocol for curriculum integration	Training for algae cultivation and tech use	Capacity-building in green jobs

6. Impact Metrics (2025–2028 Projection)

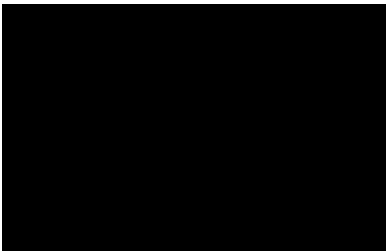

Metric	Target
CO ₂ Sequestered	1.5–2.5 million metric tons
Tonnes of algae tracked	10,000+
Products with blockchain traceability	50+
SHGs/MSMEs supported via algae networks	1,000+
Ecosystem partners integrated	25+

7. Socio-Technical Synergy

Social Layer	Technical Convergence
Health-for-Masses philosophy	Nutraceutical traceability via blockchain
Community algae farms	IoT-based monitoring & smart contract tracking
Bioremediation efforts	Real-time environmental data capture and ZKP validation
Governance of shared resources	DAO-led ecosystem governance using KarbonLedger protocols

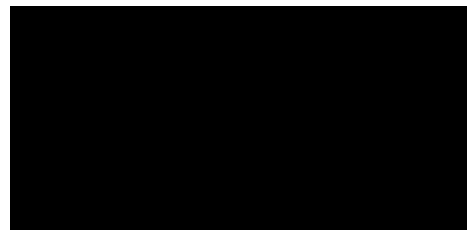

8. Communication & Co-branding

- Co-launch branded algae traceability dashboard powered by KarbonLedger.
- Joint media campaigns under #TransparentBioeconomy and #AlgaeForImpact.
- Collaborative whitepapers and case studies for UNDP, SDG councils, and climate VCs.
