

PARTNERSHIP DOCUMENT

1. Partnership Overview

Partner: TforTrees, Canada

Sector: Ecosystem Restoration, Regenerative Agroforestry, Community Resilience

Initiated: 16th June 2025

Geographic Focus: Global (with focus in climate-vulnerable, biodiverse geographies)

Konma Org Role: Protocol provider for climate data verification, impact tokenization, governance modeling, and ESG-grade digital infrastructure.

TforTrees Role: Implementing large-scale forest restoration, agroforestry, eco-enterprise development, and climate education programs.

2. Shared Vision

"A world where thriving forests and prosperous communities grow together—with transparency, tech, and trust."

Together, we:

- Scale community-led reforestation using verifiable, tokenized carbon outcomes.
- Link forest-based livelihoods to ESG-led financial instruments and registries.
- Co-develop digital infrastructure for radical transparency and decentralized governance in climate projects.

3. Strategic Objectives

- Deploy KarbonLedger's stack to track tree growth, CO₂ sequestration, and community benefit metrics in real-time.
- Integrate TforTrees' Impact Monitoring Lab with KarbonLedger's blockchain verification layer for multi-stakeholder accountability.
- Enable tokenized incentive systems for eco-stewardship, directly rewarding community governance and biodiversity impact.
- Join forces in the Global Tree Planting Consortium, synchronizing carbon impact standards and funding mobilization.

4. Roles & Responsibilities

Konma Org

- Blockchain-based traceability of tree survival, CO₂ sequestration, and biodiversity metrics.
- Open APIs for monitoring integration across mobile apps, drones, IoT and satellite sources.
- DAO-enabled governance frameworks for local stewardship councils.
- ESG-aligned reporting dashboards for partners, funders, and governments.

TforTrees

- Leads implementation of reforestation, agroforestry, and NTFP-based enterprises.
- Coordinates local governance structures (Stewardship Councils) and data collection.
- Operates the Impact Monitoring & Transparency Lab and Green Innovation Exchange.
- Onboards Consortium members and aligns policy & education stakeholders.

5. Joint Use Cases

Program	Joint Mechanism	Outcome
Community Eco-Stewardship Program	KarbonLedger tokenizes verified climate + socio-economic outcomes	Transparent rewards for communities, carbon-backed income
Global Tree Planting Consortium	Shared verification protocol with AI-enhanced growth data	Scalable tree survival validation and carbon credit issuance
Impact Monitoring Lab	API + blockchain for live traceability	Auditable data dashboards for carbon, biodiversity, and income
Green Innovation Learning Exchange	Decentralized credentialing via smart contracts	SDG-linked certification for skills, practices, and innovations

6. Impact Metrics (Projected 2025–2030)

Indicator	Target
Trees tokenized and tracked	100 million+
Verified CO ₂ sequestered	25 million metric tons
Stewardship communities onboarded	5,000+
Hectares reforested under consortium	1+ million
Eco-enterprises incubated via token incentives	10,000+
Knowledge content contributed to open portal	500+ artifacts

7. Socio-Technical Synergy

Social Layer	Technical Layer
Community ownership of forests	DAO governance modules on KarbonLedger
Transparent impact measurement	ZKP + AI + blockchain-based tracking tools
Inclusive climate literacy	Smart contract-enabled learning credentials (via GILE)
Grassroots-to-global funding	Verified impact tokens for carbon markets and ESG funds

8. Communication & Co-branding

- Joint storytelling via #ForestsWithProof and #CommunityCanopy campaigns.
- Annual co-hosted Green Innovation Summit, integrating project data into global dashboards.
- Co-authored policy briefs and ecosystem whitepapers for SDG 13, 15, and 17 stakeholders.
