

PARTNERSHIP DOCUMENT

1. Partnership Overview

Partner: Project eXit

Sector: Sustainable Urban Infrastructure, Circular Economy, Urban Fintech

Initiated: 7th MAY 2025

Geographic Focus: Nagaon, Assam (pilot) → India (scale)

Konma Org Role: Infrastructure partner for digital governance, carbon accounting, and closed-loop value systems.

eXit Role: Urban ecosystem operator integrating food, culture, sustainability, and inclusive fintech through a socio-technical commons model.

2. Shared Vision

“Redesigning cities from the roots—where technology, ecology, and community co-govern sustainable urban life.”

Together, we aim to:

- Create traceable, carbon-accountable urban ecosystems using verifiable tech.
- Empower communities through tokenized, inclusive circular economies.
- Integrate participatory governance in city infrastructure via digital protocols.

3. Strategic Objectives

- Embed KarbonLedger’s carbon tracking and ESG accounting modules into eXit’s infrastructure (buildings, food carts, mobility, events).
- Power closed-loop urban payment systems using KarbonLedger’s tokenization stack for loyalty, impact rewards, and vendor payments.
- Connect eXit’s ecosystem emissions (energy, waste, transport) to real-time carbon footprint dashboards.
- Enable DAO-based urban governance tools for community co-decision-making and ESG voting.

4. Roles & Responsibilities

KarbonLedger

- Carbon ledger infrastructure for built-environment emissions, circular economy tracking, and scope 3 accounting.
- Smart contract architecture for loyalty programs and climate-positive incentives.
- ESG-grade reporting dashboards for government and investors.
- Technical governance layer (DAO) for transparent urban planning.

eXit

- Designs and manages multi-use community space integrating food, retail, and events.
- Implements sustainable infrastructure (solar, waste, water) and local supply chains.
- Operates the tokenized closed-loop economy and loyalty system.
- Onboards communities and local enterprises as urban stakeholders.

5. Joint Use Cases

Use Case	Konma Org	eXit Application
Urban Emissions Ledger	IoT-enabled carbon tracking	Monitors food carts, solar power, waste processing
Impact-based Loyalty System	Smart contract engine	Rewards community actions (recycling, volunteering)
Closed-Loop Wallet	Tokenization + QR gateway	Digital wallet for food, events, eco-retail
DAO Urban Governance	Modular DAO + voting dApps	Enables community participation in decisions

6. Impact Metrics (Pilot Phase: 2025–2026)

Metric	Target
CO ₂ tracked and offset	2,500+ metric tons
Local vendors onboarded	100+
Token transactions	50,000+ per month
Circular economy loops activated	5 (waste, water, energy, food, packaging)
Community participation in DAO votes	1,000+ active participants
Verified ESG reports issued	Quarterly

7. Socio-Technical Synergy

Social Layer	Technical Layer
Community ownership of space	DAO-governed permissions & smart contracts
Cultural programming & tourism	Tokenized ticketing and reward credentials
Urban resource stewardship	Real-time IoT dashboards linked to carbon credits
Micro-entrepreneur equity	Transparent vendor ranking, payment trails & carbon incentives

8. Communication & Co-branding

- Joint campaign: #UrbanCommonsNow — a digital storytelling series on climate-positive cities.
- Co-authored urban sustainability playbook and DAO implementation blueprint.
- Pilot showcase for climate tech delegations, civic leaders, and impact investors.
