

Letter of Intent

Dear Xcapit Team,

On behalf of **Creative Operations and UNDP Georgia**, we are pleased to express our intent to explore a strategic collaboration with Xcapit focused on the deployment and use of your **Cardano-based USSD wallet** technology across selected pilot markets.

We recognize the value and innovation of Xcapit's infrastructure in enabling blockchain-powered financial access without requiring smartphones or internet connectivity, an essential capability for users in underserved and emerging markets. This aligns closely with Creative Operations' mission to expand inclusive digital financial services, accelerate on-chain adoption, and unlock real-world impact through accessible blockchain tools.

Through this Letter of Intent, Creative Operations proposes to:

- **Pilot Xcapit's USSD Wallet** as part of upcoming deployments and use cases where frictionless access to digital wallets is required.
- **Collaborate on product integration discussions**, including technical feasibility, requirements, and user flows relevant to the pilot regions.
- **Evaluate the performance and user impact** of the solution, with the intention of scaling usage upon successful outcomes.
- **Explore potential co-development and go-to-market opportunities** to further expand accessibility to Cardano-based financial services.

This Letter of Intent does not constitute a binding contract, but it reflects our mutual ambition to move toward a formal agreement pending successful technical

validation, alignment on implementation scope, and completion of legal and commercial terms.

We believe this collaboration has the potential to demonstrate how blockchain can meaningfully serve communities, institutions, and markets where digital infrastructure remains limited , while reinforcing Cardano's role in enabling inclusive and responsible financial innovation.

We look forward to continuing this conversation and working together toward the next stage of this partnership.

Warm regards,

Fabian Owuor
